1 Summary

This site (the front garden of 9, Ashley Gardens), lies west of the historic Roman and later town of Colchester and within the Roman 'western cemetery area'.

A test-pit was excavated to the south of a newly-constructed extension on the southern side of the house. The work was carried out in response to an enforcement notice from the Colchester Borough Council (CBC) planning enforcement team, due to a breach of the archaeological condition attached to the planning application.

The test-pit revealed a modern foundation, and a 2nd-century Roman pit. The fact that the Roman pit extended beyond the western side of the test pit (towards the new extension) indicates that other Roman features may have existed here, and would have been encountered had the new foundation beams been archaeologically excavated.

The absence of burials indicates that this site is to the west of the main area of the Roman western cemetery, which lies to the south and east along the Roman road to London.

2 Introduction (Fig 1)

This is the report on the archaeological test-pit dug at 9 Ashley Gardens, Colchester, by Colchester Archaeological Trust (CAT) on 21st of November 2014.

The site (currently open ground in the gardens of number 9) is being landscaped in the final part of a redevelopment project. Site centre is NGR TL 9827 2506.

A planning application was submitted to the LPA in July 2013 to extend the existing property. CBC Archaeological Officer (CBCAO) had identified that the development site was within an area of significant archaeological potential, and that archaeological work would be required prior to construction. Section 5 of the planning consent states:

'No development shall commence until details of a watching brief to be carried out by a suitably qualified archaeologist (during construction works) has been submitted to and agreed in writing by the Local Planning Authority. The development shall thereafter be carried out in strict accordance with these agreed details. In the event that any significant archaeological features or remains are discovered which are beyond the scope of the watching brief (and require fuller rescue excavation) the construction work shall cease immediately and shall not recommence until a revised programme of archaeological work including a scheme of investigation has been submitted to, and approved in writing, by the Local Planning Authority. Reason: To enable the inspection and recording of any items of archaeological importance'.

The omission of the condition at the time of footings excavation was a breach of the archaeological condition attached to the planning application, and so the project was subject to planning enforcement notice from CBC. Following this, the test pit was commissioned by Mr Robert Harding.

The archaeological work was carried out to a methodology agreed with CBCAO.

In addition to the WSI, all fieldwork and reporting was done in accordance with CAT *Policies and procedures* (2012), the Institute for Archaeologists' *Standard and guidance for archaeological field evaluation* (IfA 2008a) and *Standard and guidance for the collection, documentation, conservation and research of archaeological materials* (IfA 2008b), CIMS 2008a, CIMS 2008b. The guidance contained in the documents *Standards for field archaeology in the East of England* (EAA 14) and *Research and archaeology revisited: A revised framework for the East of England*, East Anglian Archaeological Occasional Papers 24 (EAA 24) was also followed.

3 Archaeological background

This section is based on records held by Essex Historic Environment Record (EHER) held at Essex County Council, County Hall, Chelmsford, and the Urban Archaeological Database held at Colchester and Ipswich Museum

The site is on the edge of the Roman western cemetery, in which numerous cremations and funerary monuments have been recorded since the nineteenth century (Hull, 1958). For a wider discussion of cemetery areas see Crummy & Crossan (1993).

The site is also located within the oppidum of Camulodunum, which has been explored since the 1930s, (Hawkes & Crummy 1995). Excavations in the 1930s revealed early Roman military ditches, probably a small fort. Additional work in the 1950s revealed further Roman ditches and timber structures; possibly a small rural farmstead.

CAT has undertaken a number of other fieldwork projects in the locality in recent years. These have demonstrated well-preserved LIA and Roman stratigraphy. It was likely that such deposits would survive on the current development site.

4 Aim

The aim of the evaluation was to establish the character; extent, date, and significance of any remains and deposits disturbed by the groundworks. Specific attention was paid to potential archaeological remains mentioned in section 3 above.

5 Results (Fig 2)

This section gives an archaeological summary of the test pit (TP1), with context and finds dating information.

TP1 was excavated under archaeological supervision by a tracked excavator using a toothless bucket, through two layers: a modern topsoil 500mm thick (L1), and a silty accumulation horizon (L2) 200mm thick. This revealed the natural sands and gravels (L3).

TP1 was located to the east of the new extension, in the southern part of the plot. Two features were identified: a modern concrete footing F1, and a Roman pit F2.

The Roman pit, which contained Roman tile and pottery, extended beyond the test pit towards the extension on the southern side of the existing property. The modern foundation F1 ran along the northern edge of TP1. This was part of the intended extension of number 9, but remained unused when the final footprint was changed.

Plate 1: concrete footing F1 is under the shovel, and Roman pit F2 is at the bottom of TP1.

Test Pit 1: Archaeological

Context	Description	Date
F1	concrete footing	modern
F2	pit	Roman 2nd century

6 Finds

by Stephen Benfield

Two finds were recovered, both from Feature 2 (F2). One is a small piece (62g) from the end of a Roman *imbrex* roof tile in a red sandy fabric. The other is a small, abraded sherd (6g) of Central Gaulish samian (Fabric BACG), dated to the 2nd century.

7 Discussion

The Ashley Gardens site is within an area of intense archaeological activity, which includes part of the western cemetery of the Roman town.

The test-pit produced a small amount of archaeological material - a piece of Roman roof tile and a 2nd-century samian ware sherd, both from Roman pit F2 which extends beyond the confines of TP1 and west towards the foundations of the new extension. This would suggest that additional Roman activity (ie, pits) would have been encountered had the new foundation beams been archaeologically excavated.

There was no evidence of burials or other funerary activity. This is probably due to the site's being located away from the main cemetery focus which lies to the south and east along the Roman road to London.

8 Acknowledgements

CAT thanks Mr Robert Harding for commissioning and funding the work. The project was managed by B Holloway, and monitored by CBCAO Chris Lister. Figures are by Emma Holloway and Howard Brooks.
