1 Summary

Archaeological monitoring and recording was carried out at 10 Ashley Gardens in advance of the construction of side and rear extensions. The development site is located within the Late Iron Age oppidum of Camulodunum, to the west of the Roman walled town and within an area of Roman cemeteries termed 'the western cemetery' or the 'Lexden cemetery'. No significant archaeological features were found.

2 Introduction (Fig 1)

This report presents the results of archaeological monitoring and recording at 10 Ashley Gardens, Colchester, Essex, which was carried out on the 14th September 2017. The work was commissioned by Joel Walsh, in advance of the construction of side and rear extensions, and was undertaken by Colchester Archaeological Trust (CAT).

In response to consultation with Colchester Borough Council Planning Services (CBCPS), Colchester Borough Council Archaeological Advisor Jess Tipper advised that in order to establish the archaeological implications of this application, the applicant should be required to commission a scheme of archaeological investigation in accordance with paragraphs 128, 129 and 132 of the *National Planning Policy Framework* (DCLG 2012).

All archaeological work was carried out in accordance with a *Brief for Continuous Archaeological Recording*, detailing the required archaeological work, written by Jess Tipper (CBCPS 2017), and a written scheme of investigation (WSI) prepared by CAT in response to the brief and agreed with CBCPS (CAT 2017).

In addition to the brief and WSI, all fieldwork and reporting was done in accordance with English Heritage's *Management of Research Projects in the Historic Environment (MoRPHE)* (English Heritage 2006), and with *Standards for field archaeology in the East of England* (EAA 14 and 24). This report mirrors standards and practices contained in the Institute for Archaeologists' *Standard and guidance for archaeological watching briefs* (ClfA 2014a) and *Standard and guidance for the collection, documentation, conservation and research of archaeological materials* (ClfA 2014b).

3 Archaeological background

The following archaeological background draws on the major published sources for Colchester archaeology, and also on the Colchester Historic Environment Record (CHER, previously the Urban Archaeological Database (UAD)) and the Essex Historic Environment Record (EHER).

The development site is located within the Late Iron Age *oppidum* of Camulodunum, to the west of the Roman walled town and within an area of Roman cemeteries termed 'the western cemetery' by Hull (1958), but more generally known as the Lexden cemetery (EHER 11713, 11714). The Lexden cemetery area encompasses a number of Iron Age and Roman burial grounds on both sides of Lexden Road (the main Roman road leading from the walled town towards London and Braughing) (Hull 1958 and CAR 11). In particular a Roman lead coffin was found immediately to the east of the development site in 1880 (EHER 13186), with many other burials found close-by.

The development site is also located on the southern edge of the Late Iron Age and early Roman settlement and industrial complex at Sheepen (EHER 11673, Scheduled Monument no. 46). Sheepen was extensively excavated in the 1930s (Hawkes & Hull 1947) and 1970s (Niblett 1985; CAR 11, 131-7). Finds were prolific, and evidence found included remains of a trackway and workshops, with evidence of metal-working and coin manufacture (Crummy 2001, 15- 16).

The Late Iron Age settlement at Sheepen was defended on its western side by the Sheepen Dyke (EHER no 11641). This was a large earth bank and ditch, which was probably constructed by c AD 10 (CAR 11, 161-2). A later addition to the Sheepen Dyke extended to the south-west for approximately 340m ('Ditch 1A') and was sectioned in several places in the 1930s (Hawkes & Hull 1947, 111-12). This stretch was possibly added shortly before the Roman invasion. It was projected to cross the southeastern corner of the Kingswode Hoe School (150m NNE of the development site). This ditch then continued towards the north bank of a stream, which is represented today by a marked dip in Sussex Road. The Sheepen Dyke was probably levelled and the ditch backfilled shortly after the Roman conquest (Crummy 2001, 90; Hawkes & Hull 1947, 51 & 112).

Many Roman pottery and tile kilns have been excavated nearby, as well as to the north-east (EHER 11692) and in the grounds of Kingswode Hoe School (EHER 13146, Hull 1963, 155-6). Recent archaeological investigation at Kingswode Hoe School has revealed post-medieval/modern features (CAT Report 578) and part of the Sheepen Dyke along with two other Roman ditches (CAT Report 623). Roman remains of an unspecified nature were also found close to the site when 'The Turrets' (89 Lexden Road) was being constructed in 1816 (Hull 1958, 292).

Archaeological investigations in and around Colchester County High School for Girls to the southwest have revealed parts of the Heath Farm Dyke North (EHER 12660, CAR 11, 32), a 'triple-ditched dyke' (EHER 12630, CAR 11, 127), a building with wooden posts (EHER 12631), palisade trenches, an irregular wattle-and-daub structure, gullies and pits (EHER 12632, CAR 11, 124-126).

A long-demolished Post windmill also stood close to the site. It was erected c 1681 (EHER 47552).

Previous archaeological evaluation at 7 Ashley Gardens (CAT Report 240) revealed an undated ditch and Roman finds and a test-pit at 9 Ashley Gardens (CAT Report 803) revealed a 2nd century Roman pit.

4 Results (Figs 2-3)

Approximately 30m of foundation trenches were dug under archaeological supervision. The trenches measured 0.5m wide by 0.9-1.1m deep.

Photograph 1 Trench shot – looking west

The trenches were excavated through two layers. Modern topsoil (L1, c 0.5m thick, very dark grey/brown sandy-loam with frequent stone and occasional tile/brick, mortar and charcoal piece inclusions) sealed a layer of subsoil (L2, dark yellow/brown sandy-loam with frequent stone and occasional tile/brick, mortar and charcoal piece inclusions). Natural sands (L3) were encountered at a depth of 0.8m in the southern extremity of the trenching.

No significant archaeological features were identified.

5 Finds

No archaeological finds were recovered.

6 Discussion

Despite being located within a site of considerable archaeological interest, no significant archaeological remains were encountered.

7 Acknowledgements

CAT thanks Joel Walsh for commissioning and funding the work. The project was managed by C Lister and carried out by N Rayner. Figures were prepared by L Pooley and S Carter. The project was monitored for the CBCPS by Jess Tipper.

Site location and description

The proposed development site lies approximately 1.6km west of Colchester town centre (Fig 1) at 10 Ashley Gardens, Colchester. The site is centred on NGR TL 98266 25067.

Proposed work

The development comprises side and rear extensions.

Archaeological background

The following archaeological background draws on the major published sources for Colchester archaeology, and also on the Colchester Historic Environment Record (CHER, previously the Urban Archaeological Database (UAD)) and the Essex Historic Environment Record (EHER).

The development site is located within the Late Iron Age *oppidum* of Camulodunum, to the west of the Roman walled town and within an area of Roman cemeteries termed 'the western cemetery' by Hull (1958), but more generally known as the Lexden cemetery (EHER 11713, 11714). The Lexden cemetery area encompasses a number of Iron Age and Roman burial grounds on both sides of Lexden Road (the main Roman road leading from the walled town towards London and Braughing) (Hull 1958 and *CAR 11*). In particular a Roman lead coffin was found immediately to the east of the development site in 1880 (EHER 13186), with many other burials found close-by.

The development site is also located on the southern edge of the Late Iron Age and early Roman settlement and industrial complex at Sheepen (EHER 11673, Scheduled Monument no. 46). Sheepen was extensively excavated in the 1930s (Hawkes & Hull 1947) and 1970s (Niblett 1985; *CAR 11*, 131-7). Finds were prolific, and evidence found included remains of a trackway and workshops, with evidence of metal-working and coin manufacture (Crummy 2001, 15- 16).

The Late Iron Age settlement at Sheepen was defended on its western side by the Sheepen Dyke (EHER no 11641). This was a large earth bank and ditch, which was probably constructed by c AD 10 (*CAR 11*, 161-2). A later addition to the Sheepen Dyke extended to the south-west for approximately 340m ('Ditch 1A') and was sectioned in several places in the 1930s (Hawkes & Hull 1947, 111-12). This stretch was possibly added shortly before the Roman invasion. It was projected to cross the southeastern corner of the Kingswode Hoe School (150m NNE of the development site). This ditch then continued towards the north bank of a stream, which is represented today by a marked dip in Sussex Road. The Sheepen Dyke was probably levelled and the ditch backfilled shortly after the Roman conquest (Crummy 2001, 90; Hawkes & Hull 1947, 51 & 112).

Many Roman pottery- and tile- kilns have been excavated nearby; to the north-east (EHER 11692) and in the grounds of Kingswode Hoe School (EHER 13146, Hull 1963, 155-6). Recent monitoring at Kingswode Hoe School has revealed post-medieval/modern features (CAT Report 578) and part of the Sheepen Dyke along with two other Roman ditches (CAT Report 623). Roman remains of an unspecified nature were also found close to the site when 'The Turrets' (89 Lexden Road) was being constructed in 1816 (Hull 1958, 292).

Archaeological investigations in and around Colchester County High School for Girls to the southwest have revealed parts of the Heath Farm Dyke North (EHER 12660, *CAR 11*, 32), a 'triple-ditched dyke' (EHER 12630, *CAR 11*, 127), a building with wooden posts (EHER 12631), palisade trenches, an irregular wattle-and-daub structure, gullies and pits (EHER 12632, *CAR 11*, 124-126).

The now demolished Second Post windmill also stood close to the site, it was erected c 1681 (EHER 47552).

Previous archaeological evaluation at 7 Ashley Gardens (CAT Report 240) revealed an undated ditch and Roman finds and a test-pit at 9 Ashley Gardens (CAT Report 803) revealed a 2nd century Roman pit.

Planning background

A planning application was made to Colchester Borough Council in June 2017 (application No. 171634) for the construction of side and rear extensions.

As the site lies within an area highlighted by the CHER/EHER as having a high potential for archaeological deposits, an archaeological condition was recommended by the Colchester Borough Council Archaeological Advisor (CBCAA). The recommended archaeological condition is based on the guidance given in the *National Planning Policy Framework* (DCLG 2012).

Requirement for work

The required archaeological work is for continuous archaeological monitoring and recording of all groundworks. Details are given in a Project Brief written by CBCAA (CBC 2017).

Specifically:

The monitoring and recording is being undertaken to identify and record any surviving archaeological deposits that may exist on site.

If unexpected remains are encountered the CBCAA will be informed immediately and the CBCAA will decide if amendments to the brief and this wsi are required to ensure adequate provision for archaeological recording. This could include the need for archaeological excavation of parts of the site which would otherwise be damaged or destroyed.

General methodology

All work carried out by CAT will be in accordance with:

- professional standards of the Chartered Institute for Archaeologists, including its *Code of Conduct* (CIfA 2014a, b)
- Standards and Frameworks published by East Anglian Archaeology (Gurney 2003, Medlycott 2011)
- relevant Health & Safety guidelines and requirements (CAT 2014)
- the Project Brief issued by the CBCAA (CBC 2017).

Professional CAT field archaeologists will undertake all specified archaeological work, for which they will be suitably experienced and qualified.

Notification of the supervisor/project manager's name and the start date for the project will be provided to CBCAA one week before start of work.

Unless it is the responsibility of other site contractors, CAT will study mains service locations and avoid damage to these.

At the start of work (immediately before fieldwork commences) an OASIS online record <http://ads.ahds.ac.uk/project/oasis/> will be initiated and key fields completed on Details, Location and Creators forms. At the end of the project all parts of the OASIS online form will be completed for submission to EHER. This will include an uploaded .PDF version of the entire report.

A project or site code will be sought from the curating museum. This code will be used to identify the project archive when it is deposited at the curating museum.

Staffing

The number of field staff for this project is estimated as follows: One CAT officer for the duration of the groundworks.

Monitoring methodology

There will be sufficient on-site attendance by CAT staff to maintain a watch on all contractors' ground works to record, excavate or sample (as necessary) any archaeological features or deposits.

All topsoil removal and ground reduction will be done with a toothless bucket.

If archaeological features or deposits are uncovered, time will be allowed for these to be planned and recorded.

If any features or deposits uncovered are to be destroyed by the proposed development, time will be allowed for these features to be excavated by hand. This includes a 50% sample of discrete features (pits, etc) and 10% of linear features (ditches, etc).

Fast hand-excavation techniques involving (for instance) picks, forks and mattocks will not be used on complex stratigraphy.

A metal detector will be used to examine spoil heaps, and the finds recovered.

Individual records of excavated contexts, layers, features or deposits will be entered on pro-forma record sheets. Registers will be compiled of finds, small finds and soil samples.

Site surveying

All features and layers or other significant deposits will be planned, and their profiles or sections recorded. The normal scale will be site plans at 1:20 and sections at 1:10, unless circumstances indicate that other scales would be appropriate.

The site grid will be tied into the National Grid. Corners of excavation areas and trenches will be located by NGR coordinates.

Environmental sampling policy

CAT has an arrangement with Val Fryer/Lisa Gray whereby any potentially rich environmental layers or features will be appropriately sampled as a matter of course, but only if they are datable. Any processing and reporting will be done by VF/LG. If any complex or outstanding deposits are encountered, VF/LG will be asked onto site to advise. EH Regional Adviser is available for further advice.

Human remains

CAT follows the policy of leaving human remains *in situ* unless there is a clear indication that the remains are in danger of being compromised as a result of their exposure. If circumstances indicated it were prudent or necessary to remove remains from the site during the monitoring, the following criteria would be applied; if it is clear from their position, context, depth, or other factors that the remains are ancient, then normal procedure is to apply to the Department of Justice for a licence to remove them. In that case, conditions laid down by the license will be followed. If it seems that the remains are not ancient, then the coroner, the client, and CBCAA will be informed, and any advice and/or instruction from the coroner will be followed.

Photographic record

Will include both general and feature-specific photographs, the latter with scale and north arrow. A photo register giving context number, details, and direction of shot will be prepared on site, and included in site archive.

Finds

All significant finds will be retained.

All finds, where appropriate, will be washed and marked with site code and context number.

Stephen Benfield (CAT) normally writes our finds reports. Some categories of finds are automatically referred to other CAT specialists:

small finds, metalwork, coins, etc: Pip Parmenter / Laura Pooley

animal bones (small groups): Pip Parmenter

flints: Adam Wightman

or to outside specialists:

animal bones (large groups) and human remains: Julie Curl

environmental processing and reporting: Val Fryer / Lisa Gray

conservation of finds: staff at Colchester Museum / Laura Ratcliffe

Other specialists whose opinion can be sought on large or complex groups include:

Roman brick/tile: Ernest Black

Roman glass: Hilary Cool

Prehistoric pottery: Paul Sealey

Other: EH Regional Adviser in Archaeological Science (East of England).

All finds of potential treasure will be removed to a safe place, and the coroner informed immediately, in accordance with the rules of the Treasure Act 1996. The definition of treasure is given in pages 3-5 of the Code of Practice of the above act. This refers primarily to gold or silver objects.

Requirements for conservation and storage of finds will be agreed with the appropriate museum prior to the start of work, and confirmed to CBCAA.

Results

Notification will be given to CBCAA when the fieldwork has been completed.

An appropriate archive will be prepared to minimum acceptable standards outlined in *Management of Research Projects in the Historic Environment* (English Heritage 2006).

The report will be submitted within 6 months of the end of fieldwork, with a copy supplied to CBCAA as a PDF.

The report will contain:

- Location plan of the groundworks in relation to the proposed development. At least two corners of the site will be given 10 figure grid references.
- Section/s drawings showing depth of deposits from present ground level with Ordnance Datum, vertical and horizontal scale.
- Archaeological methodology and detailed results including a suitable conclusion and discussion and results referring to Regional Research Frameworks (Medlycott 2011).
- All specialist reports or assessments
- A concise non-technical summary of the project results.

An EHER summary sheet will also be completed within four weeks and supplied to CBCAA.

Results will be published, to at least a summary level (i.e. round-up in *Essex Archaeology & History*) in the year following the archaeological field work. An allowance will be made in the project costs for the report to be published in an adequately peer reviewed journal or monograph series

Archive deposition

It is a policy of Colchester Borough Council that the integrity of the site archive be maintained (i.e. all finds and records should be properly curated by a single organisation), with the archive available for public consultation. To achieve this desired aim it is assumed that the full archive will be deposited in Colchester Museums *unless otherwise agreed in advance*. (A full copy of the archive shall in any case be deposited).

By accepting this WSI, the client agrees to deposit the archive, including all artefacts, at Colchester & Ipswich Museum.

The requirements for archive storage will be agreed with the curating museum.

If the finds are to remain with the landowner, a full copy of the archive will be housed with the curating museum.

The archive will be deposited with Colchester & Ipswich Museum within 3 months of the completion of the final publication report, with a summary of the contents of the archive supplied to CBCAA.

Monitoring

CBCAA will be responsible for monitoring progress and standards throughout the project, and will be kept regularly informed during fieldwork, post-excavation and publication stages.

Notification of the start of work will be given to CBCAA one week in advance of its commencement.

Any variations in this WSI will be agreed with CBCAA prior to them being carried out.

CBCAA will be notified when the fieldwork is complete.

The involvement of CBCAA shall be acknowledged in any report or publication generated by this project.

Project details

Project name	Archaeological monitoring at recording at 10 Ashley Gardens, Colchester, Essex, CO3 3QG
Short description of the project	Archaeological monitoring and recording was carried out at 10 Ashley Gardens in advance of the construction of side and rear extensions. The development site is located within the Late Iron Age oppidum of Camulodunum, to the west of the Roman walled town and within an area of Roman cemeteries termed 'the western cemetery' or the 'Lexden cemetery'. No significant archaeological features were uncovered.
