1 Summary

Archaeological evaluation (one trial-trench) was carried out at Lanham Manor Farm, Cressing, Essex in advance of a commercial development involving the erection of new build and conversion of present buildings due to the presence of a medieval moat at the site. Evaluation uncovered the remains of this moat.

2 Introduction (Fig 1)

This is the archive report for an archaeological evaluation by trial-trenching at Lanham Manor Farm, Cressing, Essex which was carried out on 20th and 21st September 2017. The work was commissioned by Andrea Savill, Athena Architectural Services on behalf of Simon Dixon-Smith in advance of a commercial development involving the erection of new build and conversion of present buildings, and was carried out by Colchester Archaeological Trust (CAT).

In response to consultation with Essex County Council Place Services (ECCPS), Historic Environment Advisor Teresa O’Connor advised that in order to establish the archaeological implications of this application, the applicant should be required to commission a scheme of archaeological investigation in accordance with the National Planning Policy Framework (DCLG 2012).

All archaeological work was carried out in accordance with a Brief for archaeological evaluation, detailing the required archaeological work, written by Teresa O’Connor (ECCPS 2017), and a written scheme of investigation (WSI) prepared by CAT in response to the brief and agreed with ECCPS (CAT 2017).

In addition to the brief and WSI, all fieldwork and reporting was done in accordance with English Heritage’s Management of Research Projects in the Historic Environment (MoRPHE) (English Heritage 2006), and with Standards for field archaeology in the East of England (EAA 14 and 24). This report mirrors standards and practices contained in the Institute for Archaeologists’ Standard and guidance for archaeological field evaluation (CIfA 2014a) and Standard and guidance for the collection, documentation, conservation and research of archaeological materials (CIfA 2014b).

3 Archaeological background

The following archaeological background draws on the Essex Historic Environment Record (EHER) held at Essex County Council, County Hall, Chelmsford, Essex.

The EHER shows that the development site will potentially affect a sensitive heritage asset. Cartographic evidence indicates that the proposed access road, car parking and new building (Building F) lies on and across the line of the northern arm of a medieval moat that surrounded Lanham Farm (HER 6437-8). Many of the moats in northwest Essex have their origins in the 12th- and 13th-centuries. A large part of this moated circuit is no longer visible having been backfilled. The access road, new building and landscaping needs to be assessed as it is probable that this aspect of the development will disturb or destroy archaeological deposits of medieval and post-medieval date.
4 Results (figs 2-3)
One trial-trench was excavated within the development site. It measured 23m in length and 1.8m in width and was positioned to capture the northwest branch of the moat. Five layers were recorded. Modern topsoil (L1, c 0.02-0.06m thick) sealed subsoil (L2, c 0.25-0.54m thick). L2 sealed a layer of backfill (L3, up to c 0.24m thick), beneath which was mixed backfill and crush (L4, up to c 0.06m thick). L4 sealed natural clay (L5). Layers L2-L4 had slumped into moat F1.

Medieval moat F1 was uncovered. It was aligned NE-SW and measured at least 6.5m in width although the NW edge was not identified during the evaluation. The moat was dug to a depth of 1.4m below current ground level but was not bottomed. Excavations ceased due to safe working depths and waterlogging in the base of the feature.
Finds  
by Stephen Benfield

A quantity of finds was recovered from the middle fill of the moat F1 (1). All are of modern date (c 19th- to late 19th- or early 20th-century) and none is of any particular archaeological significance. They are briefly listed and described below. The pottery fabrics refer to the post-Roman pottery fabric series referencing CAR 7.

Pottery: there is a quantity of pottery from several different vessels consisting of Staffordshire-type white earthenwares (Fabric 40D), including sherds from transfer decorated plates, a sherds from a Yellow ware mixing bowl (Fabric 48E) and a sherds from a white stoneware preserve jar with vertical grooved/ridged exterior (Fabric 47). Ceramic building material: there is a single piece from a red brick. Glass: the glass consists of a sherd from the neck of a mould-blown bottle (medium green glass) and the body of a carbonated mineral water bottle (cod bottle) in frosted pale green glass with moulded raised lettering – P H Jordan / Braintree (surrounding a crest made up from initials PHJ) and with letter J on bottle base underside. Metal: the metal objects consist of the body of an enamelled saucepan (blue exterior), the iron handle from a hob kettle and a spring-tine from an agricultural cultivator.

Discussion

Archaeological evaluation uncovered the remains of the medieval moat indicated on the late 19th-century OS map of the site. Finds from the fill of F1 show that the moat was visible until the early 20th-century, confirmed in later editions of OS maps issued in 1919 and 1938. Unfortunately, as the feature could not be bottomed no dating evidence was retrieved to indicate when the moat was dug. Evaluation has also shown that the side of the moat extended approximately 2m further to the SE than the OS maps suggest.

Acknowledgements

CAT thanks Andrea Savill of Athena Architectural Services and Simon Dixon-Smith for commissioning and funding the work. The project was managed by C Lister, fieldwork was carried out by N Rayner with G Morgan, Z Eksen, H Furniss and J Roberts. Figures are by JR, L Pooley and S Carter. The project was monitored for ECCPS by Teresa O’Connor.
