#### 1 Summary

Archaeological monitoring was carried out at 22 Roman Road, Colchester, Essex, during groundworks for a two-storey extension to the rear of the property. The site lies within the Roman walled town, only 50m away from the a surviving stretch of the wall. The only feature observed was a post-medieval pit in the raft reduction as the pads were excavated and poured prior to an archaeologists attendance.

#### 2 Introduction (Fig 1)

This report presents the results of archaeological monitoring undertaken by the Colchester Archaeological Trust (CAT) at 22 Roman Road, Colchester, Essex on 8th to 9th November 2021. The work was commissioned by the homeowner and took place during groundworks for a single-storey rear extension.

In response to consultation with Colchester Borough Council Planning Services (CBCPS), the Colchester Borough Council Archaeological Advisor Richard Hoggett advised that in order to establish the archaeological implications of this application, the applicant should be required to commission a scheme of archaeological investigation in accordance with the *National Planning Policy Framework* (MHCLG 2019).

All archaeological work was carried out in accordance with a *Brief for Archaeological Investigation*, detailing the required archaeological work, written by Richard Hoggett (CBCPS 2021), and a written scheme of investigation (WSI) prepared by CAT in response to the brief and agreed with CBCPS (CAT 2021).

In addition to the brief and WSI, all fieldwork and reporting was done in accordance with *Management of Research Projects in the Historic Environment (MoRPHE)* (Historic England 2016), and with *Standards for field archaeology in the East of England* (EAA **14** and **24**). This report mirrors standards and practices contained in the Institute for Archaeologists' *Standard and guidance for archaeological watching brief* (CIfA 2014a) and *Standard and guidance for the collection, documentation, conservation and research of archaeological materials* (CIfA 2014b).

#### 3 Archaeological background (Fig 2)

The following archaeological background draws on the Colchester Archaeological Trust report archive and the Colchester Historic Environment Record (CHER/ECC numbers; accessible via Colchester Heritage Explorer (https://colchesterheritage.co.uk/map)).

The proposed development is within the area of the Roman town of *Colonia Claudia Victricensis*, and the property is located 50m west of the Town Wall, a scheduled monument (NHLE no. 1003772). It is also located 200m southeast of Duncan's Gate and 260m east-northeast of Colchester Castle (set within Colchester Castle Park, scheduled monument NHLE no. 1002217).

The Roman wall was built around the town in the later 1st century AD following the revolt led by Boudica. It is constructed of a core of layered septaria and mortar faced with coursed septaria and tile. A recent study has concluded that the wall has an average width of 2.67m (including offsets) which is equivalent to precisely nine Roman feet (*pedes Monetales*). A hypothetical cross-section of the wall shows the foundations as being 3.77m wide (Crummy 2003). Above ground, the survival of the wall is very patchy. Some sections are in relatively good condition, with large areas of intact facing surviving (such as around Balkerne Gate to the west of the town). The section of the wall around Duncan's Gate however, has lost up to 2.4m in width and nothing of the original exterior face survives, only the core. The majority of what is standing has been refaced or completely rebuilt in brick and stone.

Other archaeological work undertaken by CAT in the vicinity includes a small number of negative watching briefs – 3 Roman Road (CAT Report 648), 5 Roman Road (CAT Report 230), 10 Roman Road (CAT Report 1126), 15 Roman Road (CAT Report 906), 24 Castle Road (CAT

Report 67) and 41a Castle Road (CAT Report 98). However, other work at 24 Castle Road (CAT Report 158) revealed a fragment of an *opus signinum* Roman floor and a collapsed wall of a Roman building.

Groundworks 40m to the south-east at 12 Roman Road (CAT Report 997) in 2016 revealed modern/post-Roman layers for a depth of approximately 0.8m. However, the soakaway in the south-eastern corner of the garden was excavated to a depth of 1.25m. Beneath modern/post-Roman layers (c 0.85m) was a layer of Roman accumulation (0.23m thick) sealing a silty-loam (L4) that may have been the upper part of the Roman rampart which was piled up behind the town wall.

#### 4 Aims

Archaeological monitoring was undertaken to excavate and record any archaeological deposits which were exposed by the groundworks.

#### **5 Results** (Figs 2-3)

Four pads were hand-excavated and the concrete poured prior to the attendance of a CAT archaeologist. The pads were 1m square and dug to a depth of approximately 2m. The only layer still visible above the pads was a layer of concrete and made-ground (L1, *c* 0.90-1.00m thick, soft moist dark grey/brown clayey silt with charcoal flecks, brick flecks, tile flecks).

An area for a concrete raft measuring 3.13m by 4.40m was mechanically excavated under the supervision of a CAT archaeologist. It was excavated through a layer of concrete and topsoil (L1, c 0.90-1.00m thick) onto a layer of made-ground (L2, c 0.90-1.00m below current ground level [bcgl], friable moist dark grey/brown silt with charcoal flecks, oyster flecks, daub flecks, brick flecks, tile flecks).

Post-medieval pit F1 was cut into L2 and was not excavated. Residual pottery dating to the Roman period was recovered from the surface.

Photograph 1 F1 and representative section above poured concrete pad – view west

Photograph 2 F1 and L2, plus poured concrete pads – view east

#### 6 Finds

#### 6.1 Pottery

by Dr Matthew Loughton

The watching brief uncovered six sherds of Roman and medieval pottery weighing 213g with an EVE of 0.45. This material was recovered from pit F1 and layer L2.

Pit F1 produced three sherds of late Roman pottery: one (19g) of Hadham white-slipped ware (fabric MQ G) dating to AD 225/250-400; one (16g) from a Cam 305B (EVE: 0.10) flanged bowl in a Colchester black burnished fabric (fabric GB) which dates to AD 275-425; and one (13g) of fabric DJ (coarse oxidised and related wares).

Layer L2 produced three sherds of pottery (165g) from a Baluster jug (EVE: 0.35) in Colchester-type ware (fabric 21A), decorated in the middle style thin slip painting, which dates to c AD 1375/1400-1450 (Cotter 2000, 118, 128).

#### 6.2 Glass

by Laura Pooley

A piece of post-medieval olive green bottle glass (72.4g) came from L2 (finds no.2).

#### 7 Conclusion

As all of the pads were unfortunately excavated without archaeological supervision, it is impossible to know if the groundworks impacted on any significant archaeological remains. The only feature observed was a post-medieval pit, containing residual Roman pottery, that was not

excavated as dig-depth had been reached. Due to the high concentration of Roman archaeology in the center of Colchester residual Roman finds are often found in later contexts.

#### 8 Acknowledgements

CAT thanks the homeowner for commissioning and funding the work. The project was managed by C Lister and A Wightman and carried out by A Smith. Figures were prepared by S Veasey. The project was monitored for CBCPS by Dr Simon Wood.

#### Site location and description

The proposed development site is located within the main historic centre of Colchester at 22 Roman Road, Colchester, Essex (Fig 1). The site is centred on National Grid Reference (NGR) TM 00123 25401.

#### **Proposed work**

The development comprises a proposed single-storey rear extension, external alterations and repair and replacement of existing windows and doors.

#### Archaeological background

The following archaeological background draws on the Colchester Archaeological Trust report archive and the Colchester Historic Environment Record (CHER, ECC/MCC numbers) accessed via the Colchester Heritage Explorer (www.colchesterheritage.co.uk)

The proposed development is within the area of the Roman town of *Colonia Claudia Victricensis*, and the property is located 50m west of the Town Wall, a scheduled monument (NHLE no. 1003772). This stretch of wall is the longest surviving part of the wall (MCC859; Colchester Archaeological Trust Report 356). It is also located 200m southeast of Duncan's Gate and 260m east-north-east of Colchester Castle (set within Colchester Castle Park, scheduled monument NHLE no. 1002217).

The Roman wall was built around the town in the later 1st century AD following the revolt led by Boudica. It is constructed of a core of layered septaria and mortar faced with coursed septaria and tile. A recent study has concluded that the wall has an average width of 2.67m (including offsets) which is equivalent to precisely nine Roman feet (pedes Monetales). A hypothetical cross-section of the wall shows the foundations as being 3.77m wide (Crummy 2003). Some previous work shows that the wall foundations were surprisingly shallow at 600mm deep (Hull 1958, 25-6). Work by CAT at the Sixth Form College in 2005 shows the stone foundations to be 1.2m deep with wooden piles below (CAT report 347), although, being water-logged, ground conditions here presumably explain their exceptional depth. Trialholes confirmed that survival of the foundations varies. Where they have not been robbed away, the foundations extend 2.1m from the existing face of the wall and are in a sound state of preservation. Above ground, the survival of the wall is very patchy. Some sections are in relatively good condition, with large areas of intact facing surviving (such as around Balkerne Gate to the west of the town). The section of the wall around Duncan's Gate however, has lost up to 2.4m in width and nothing of the original exterior face survives, only the core. The majority of what is standing has been refaced or completely rebuilt in brick and stone.

Other archaeological work undertaken by CAT in the vicinity includes a small number of negative watching briefs – 3 Roman Road (CAT Report 648), 5 Roman Road (CAT Report 230), 10 Roman Road (CAT Report 1126), 15 Roman Road (CAT Report 906), 24 Castle Road (CAT Report 67) and 41a Castle Road (CAT Report 98). However, other work at 24 Castle Road (CAT Report 158) revealed a fragment of an *opus signinum* Roman floor and a collapsed wall of a Roman building.

Groundworks 40m to the south-east at 12 Roman Road (CAT Report 997) in 2016 revealed modern/post-Roman layers (L1/L2) for a depth of approximately 800mm. However, the soakaway in the south-eastern corner of the garden was excavated to a depth of 1.25m. Beneath L1/L2 (c 850mm) was a layer of Roman accumulation (L3, 230mm) sealing a silty-loam (L4) that may be the upper part of the Roman rampart which was piled up behind the town wall.

#### Planning background

A planning application was made to Colchester Borough Council in January 2021 (application No. 210020) proposing the *removal of existing greenhouse*. *Proposed single storey rear extension*, *external alterations and repair and replacement of existing windows and doors*.

As the site lies within an area highlighted by the CHER as having a high potential for archaeological deposits, an archaeological condition was recommended by the Colchester Borough Council Archaeological Advisor (CBCAA). This was for archaeological monitoring of the groundworks during construction and is based on the guidance given in the National Planning Policy Framework (MHCLG 2019).

#### Requirement for work

The required archaeological work is for an archaeological investigation of all groundworks. Details are given in a Project Brief written by CBCAA (CBC 2021).

#### Specifically:

The investigation is being undertaken to identify and record any surviving archaeological deposits that may exist on site.

If unexpected remains are encountered the CBCAA will be informed immediately and the CBCAA will decide if amendments to the brief are required to ensure adequate provision for archaeological recording.

In the exceptional circumstances that important, well-preserved mosaic floors (or similar remains) are discovered, which cannot otherwise be avoided by the development (and satisfactorily preserved in situ), a contingency will be required for the block-lifting of these archaeological remains, e.g. well-preserved mosaic remains and/or exceptional burnt remains related to the Boudiccan destruction of AD 60/61, and for subsequent conservation and presentation. A decision about the need for conservation and lifting of important archaeological remains will be made in consultation with specialist stakeholders (e.g, Historic England, Colchester Museum and Norfolk Museums Service, Conservation and Design Services).

The method and form of development will also be monitored to ensure that it conforms to the previously agreed locations and techniques upon which the brief is based. Any variations will be discussed with the CBCAA immediately.

#### General methodology

All work carried out by CAT will be in accordance with:

- professional standards of the Chartered Institute for Archaeologists, including its Code of Conduct (CIfA 2014a, b)
- Standards and Frameworks published by East Anglian Archaeology (Gurney 2003, Medlycott 2011)
- relevant Health & Safety guidelines and requirements (CAT 2020)
- the Project Brief issued by the CBCAA (CBC 2021).

Professional CAT field archaeologists will undertake all specified archaeological work, for which they will be suitably experienced and qualified.

Notification of the supervisor/project manager's name and the start date for the project will be provided to CBCAA one week before start of work.

Unless it is the responsibility of other site contractors, CAT will study mains service locations and avoid damage to these.

At the start of work (immediately before fieldwork commences) an OASIS online record http://ads.ahds.ac.uk/project/oasis/ will be initiated and key fields completed on Details, Location and Creators forms. At the end of the project all parts of the OASIS online form will be completed for submission to Essex Historic Environment Record (EHER). This will include an uploaded .PDF version of the entire report.

A unique HER event number will be obtained from the CBCAA prior to the commencement of fieldwork. The curating museum will be notified of the details of the project and the event code, which will be used to identify the project archive when depositing at the end of the project.

#### **Staffing**

The number of field staff for this project is estimated as follows: One CAT officer for the duration of the groundworks.

#### Investigation methodology

There will be sufficient on-site attendance by CAT staff to maintain a watch on all contractors' ground works to record, excavate or sample (as necessary) any archaeological features or deposits. The investigation will involve monitoring of all groundworks and inspection of upcast soil.

All topsoil removal and ground reduction will be done with a toothless bucket.

If archaeological features or deposits are uncovered, time will be allowed for these to be planned and recorded.

If any features or deposits uncovered are to be destroyed by the proposed development, time will be allowed for these features to be excavated by hand. This includes a 50% sample of discrete features (pits, etc), 10% of linear features (ditches, etc) and 100% of all complex features and burials (see Human Remains policy below).

Fast hand-excavation techniques involving (for instance) picks, forks and mattocks will not be used on complex stratigraphy.

A metal detector will be used to examine spoil heaps, and the finds recovered.

Individual records of excavated contexts, layers, features or deposits will be entered on proforma record sheets. Registers will be compiled of finds, small finds and soil samples.

#### Site surveying

Normal scale for archaeological site plans and sections is 1:20 and 1:10 respectively, unless circumstances indicate that other scales would be more appropriate.

The site grid will be tied into the National Grid. Corners of excavation areas and trenches will be located by NGR coordinates.

#### **Environmental sampling policy**

The number and range of samples collected will be adequate to determine the potential of the site, with particular focus on palaeoenvironmental remains including both biological remains (e.g. plants, small vertebrates) and small sized artefacts (e.g. smithing debris), and to provide information for sampling strategies on any future excavation. Samples will be collected for potential micromorphical and other pedological sedimentological analysis. Environmental bulk samples will be 40 litres in size (assuming the context is large enough).

Sampling strategies will address questions of:

- the range of preservation types (charred, mineral-replaced, waterlogged), and their quality
- concentrations of macro-remains
- and differences in remains from undated and dated features
- variation between different feature types and areas of site

CAT has an arrangement with Val Fryer / Lisa Gray whereby any potentially rich environmental layers or features will be appropriately sampled as a matter of course. Trained CAT staff will do any processing and the flots passed to Val Fryer / Lisa Gray for analysis and reporting.

Should any complex, or otherwise outstanding deposits be encountered, VF/LG will be asked onto site to advise. Waterlogged 'organic' features will always be sampled. In all cases, the advice of VF/LG and/or the Historic England Regional Advisor in Archaeological Science (East of England) on sampling strategies for complex or waterlogged deposits will be followed, including the taking of monolith samples.

#### **Human remains**

CAT follows the policy of leaving human remains *in situ* unless there is a clear indication that the remains are in danger of being compromised as a result of their exposure or unless advised to do so by the project osteologist or CBCAA.

CBCAA will be notified immediately if any human remains are encountered during the investigation.

If circumstances indicated it were prudent or necessary to remove remains from the site during the monitoring, the following criteria would be applied; if it is clear from their position, context, depth, or other factors that the remains are ancient, then normal procedure is to apply to the Department of Justice for a licence to remove them and seek advice from the project osteologist. Human remains removed from site for analysis this may involve radiocarbon dating (see finds section).

Following HE guidance (HE 2018) if the human remains are not to be lifted, the project osteologist should be available to record the human remain *in situ* (i.e. a site visit). Conditions laid down by the DoJ license will be followed. If it seems that the remains are not ancient, then the coroner, the client, and the CBCAA will be informed, and any advice and/or instruction from the coroner will be followed.

#### Photographic record

Will include both general and feature-specific photographs, the latter with scale and north arrow. A photo register giving context number, details, and direction of shot will be prepared on site, and included in site archive. Digital site photographs will be taken and archived as per Historic England guidelines (HE 2015a).

#### **Finds**

All significant finds will be retained.

All finds, where appropriate, will be washed and marked with site code and context number. CAT may use local volunteers to assist the CAT Finds Officer with this task.

Most of our finds reports are written internally by CAT Staff under the supervision and direction of Philip Crummy (Director) and Howard Brooks (Deputy Director). This includes specialist subjects such as:

<u>ceramic finds (pottery and ceramic building material)</u>: Matthew Loughton <u>animal bones</u>: Alec Wade (or Adam Wightman, small groups only)

small finds, metalwork, coins, etc: Laura Pooley

non-ceramic bulk finds: Laura Pooley

flints: Adam Wightman

environmental processing: Bronagh Quinn

project osteologist (human remains): Meghan Seehra

or to outside specialists:

animal and human bone: Julie Curl (Sylvanus)

environmental assessment and analysis: Val Fryer / Lisa Gray

radiocarbon dating: SUERC Radiocarbon Dating Laboratory, Glasgow

conservation/x-ray: Laura Ratcliffe (LR Conservation) / Norfolk Museums Service,

Conservation and Design Services

Other specialists whose opinion can be sought on large or complex groups include:

flint: Hazel Martingell

<u>prehistoric pottery: Stephen Benfield / Nigel Brown / Paul Sealey Roman pottery: Stephen Benfield / Paul Sealey / Jo Mills / Val Rigby / </u>

**Gwladys Monteil** 

Roman brick/tile: Ian Betts (MOLA)

Roman glass: Hilary Cool small finds: Nina Crummy

other: EH Regional Adviser in Archaeological Science (East of England).

All finds of potential treasure will be removed to a safe place, and the coroner informed immediately, in accordance with the rules of the Treasure Act 1996. The definition of treasure is given in pages 3-5 of the Code of Practice of the above act. This refers primarily to gold or silver objects.

Requirements for conservation and storage of finds will be agreed with the appropriate museum prior to the start of work, and confirmed to CBCAA.

A contingency will be made in the budget for scientific assessment/analysis if suitable deposits are identified. This can include soil micromorphological and geochemical analysis of floors and dark earth deposits and/or absolute dating (such as archaeomagnetic and radiocarbon). The Historic England Regional Science Advisor will be consulted for advice.

#### Results

Notification will be given to CBCAA when the fieldwork has been completed.

An appropriate archive will be prepared to minimum acceptable standards outlined in *Management of Research Projects in the Historic Environment* (HE 2015b).

The report will be submitted within 6 months of the end of fieldwork, with a copy supplied to CBCAA as a PDF.

The report will contain:

- Location plan of the groundworks in relation to the proposed development. At least two corners of the site will be given 10 figure grid references.
- Section/s drawings showing depth of deposits from present ground level with Ordnance Datum, vertical and horizontal scale.
- Archaeological methodology and detailed results including a suitable conclusion and discussion and results referring to Regional Research Frameworks (Medlycott 2011).
- · All specialist reports or assessments
- A concise non-technical summary of the project results.

An EHER summary sheet will also be completed within four weeks and supplied to CBCAA.

Results will be published, to at least a summary level (i.e. round-up in *Essex Archaeology & History*) in the year following the archaeological field work. An allowance will be made in the project costs for the report to be published in an adequately peer reviewed journal or monograph series.

A PDF copy of the full report will be uploaded by CAT to the OASIS website and the Colchester Archaeological Trust's Online Report Library (<a href="http://cat.essex.ac.uk/">http://cat.essex.ac.uk/</a>), both of which are publicly accessible.

#### **Archive deposition**

It is a policy of Colchester Borough Council that the integrity of the site archive be maintained (i.e. all finds and records should be properly curated by a single organisation), with the archive available for public consultation. To achieve this desired aim it is assumed that the full archive will be deposited in Colchester Museums *unless otherwise agreed in advance*. (A full *copy* of the archive shall in any case be deposited).

By accepting this WSI, the client agrees to deposit the archive, including all artefacts, at Colchester & Ipswich Museum.

The requirements for archive storage will be agreed with the curating museum.

If the finds are to remain with the landowner, a full copy of the archive will be housed with the curating museum and provision must be made for additional recording (e.g. photography, illustration and analysis) as appropriate.

The archive will be deposited with Colchester & Ipswich Museum or an alternate repository (approved by COLEM and CBCAA) within 3 months of the completion of the final publication report, with a summary of the contents of the archive supplied to CBCAA. Digital archives will be curated with the Archaeology Data Service, or similar accredited digital archive repository, that safeguard the long-term curation of digital records.

The CBCAA will be notified of the archiving timetable throughout the project and once deposition has occurred.

A digital / vector drawing of the site be given to the CBCAA for integration into the HER.

#### **Monitoring**

CBCAA will be responsible for monitoring progress and standards throughout the project, and will be kept regularly informed during fieldwork, post-excavation and publication stages.

Notification of the start of work will be given to CBCAA one week in advance of its commencement.

Any variations in this WSI will be agreed with CBCAA prior to them being carried out.

CBCAA will be notified when the fieldwork is complete.

The involvement of CBCAA shall be acknowledged in any report or publication generated by this project.
