CAT Report 1918 Archaeological monitoring at Ciderwood House, Stanway Green, Stanway, Colchester, Essex, CO3 0RA	CAT code: 2022/04d
	Planning reference: 212233
	CHER event no.: ECC4781
	OASIS ref.: colchest3-506379
	Grid Reference: TL 96130 23387
	Number of site visits: 2
	Dates of visit: 12th August and 15th
	September 2022

Nature of the work:

Observation of groundworks for a side extension, a soakaway and a drainage trench.

Reason for condition:

The development site is located *c* 30m from Gryme's Dyke (SAM NHLE No. 1019992, MCC7464, MCC7465). The Colchester dykes and earthworks, which are among the most important prehistoric monuments in Britain, define the extent of the pre-Roman 'proto-town' (or *oppidum* in latin) of *Camulodunum*. To the south/south-west of the site is the location of the nationally important Late Iron Age and Roman complex at Gosbecks (SAM NHLE No. 1002180, MCC7470) which includes dykes, droveways and field systems, a large enclosure (MCC7044), a farmstead possibly linked to Cunobelin (MCC2849), a small Roman fort (MCC7472), a Roman temple (MCC2831) surrounded by a monumental portico (MCC7043), a Roman theatre (MCC2831), a Roman water main possibly leading to a bathhouse (MCC2903) and a Roman road (MCC2529).

% of total seen: 100% of the groundworks.

Results:

The following groundworks were monitored by a CAT archaeologist in response to a brief set by Dr Simon Wood of Colchester Borough Council Planning Services.

Approximately 17.60m of foundation trenching was machine excavated under archaeological supervision. The trenching was 0.65m wide and between 0.15 and 0.50m deep.

A soakaway, 1.40 by 2.00m and 0.75m deep, and drainage trench, 10.50m long, 0.65m wide and 0.40m deep, were also machine excavated.

Three horizons were observed consistently throughout:

- topsoil (L1, c 0.05-0.15m thick, loose firm dark grey/brown silty clay) overlaid
- a subsoil layer (L2, *c* 0.33-0.64m thick, firm light grey/brown/orange silty clay), which sealed
- hard brown-orange natural loamy sand (L3, *c* 0.50-0.75m below current ground level, firm/hard dry light/medium orange loamy sand).

No archaeological features or finds were uncovered during monitoring.

Photograph 2 Site shot showing drainage trench and soakaway, looking south-west.

Site location and description

The proposed development site is located approximately 3.9km southwest from the main historic core of Colchester at Ciderwood House, Stanway Green. Stanway, Colchester, Essex. (Fig 1). The site is centred on National Grid Reference (NGR) TL 96130 23387.

Proposed work

The development comprises of a front and side extension to allow internal alterations and create a linked annexe.

Archaeological background

The following archaeological background draws on the Colchester Archaeological Trust report archive and the Colchester Historic Environment Record (CHER/ECC numbers; accessible via Colchester Heritage Explorer (<u>https://colchesterheritage.co.uk/map</u>).

The proposed development is situated within an area of archaeological significance. It lies *c* 30m from Gryme's Dyke (Scheduled Ancient Monument NHLE no. 1019992, MCC7464 and MCC7465). The Colchester dykes and earthworks are among the most important prehistoric monuments in Britain. They define the extent of the pre-Roman 'proto-town' (or *oppidum* in Latin) of *Camulodunum*. *Camulodunum* was the capital and home of Cunobelin, who was arguably of the most important leader in Britain in the decades leading up to the Roman invasion of AD 43. There have been several studies of and excavations on the dykes, which are described fully in the two principal reference works: *Camulodunum*, by CFC Hawkes and MR Hull (1947), and *Camulodunum 2, Colchester Archaeological Report* **11** (*CAR* **11**), by CFC Hawkes and Philip Crummy (1995).

Map 1: Extract of the general map of Colchester showing the locations of earthworks and excavations discussed in *CAR* **11** (Fig 6.1), current site is labelled blue.

Gryme's dyke is the outermost, longest and latest of all the dykes on the western side of the town. Gryme's Dyke faced westwards and took the form of a deep V-shaped ditch with a steep earth bank behind it. The dyke can be be divided into three distinct sections on topographical grounds, i.e. Gryme's Dyke North, South and Middle (*CAR* **11**, 27-9) The dyke survives for much of its length as a visible but badly damaged and denuded earthwork The current site is located adjacent to an area named in *CAR* **11** as Grymes Dyke Middle.

To the immediate south/southeast of the site is the nationally important Late Iron Age and Roman complex at Gosbecks (Scheduled Monument NHLE no. 1002180; MCC7470) which is known from aerial photographs, geophysical surveys, and excavations (Hull 1958, 259-71; *CAR* **11**, 95-105; CAT Report 30, 45 and 127). Archaeological remains at Gosbecks include: dykes, droveways and field systems; a large enclosure (MCC7044), possibly Cunobelin's farmstead (MCC7044); a small Roman fort of probable Claudian date (MCC7472); a Romano-British temple (MCC2849), surrounded by a monumental portico (MCC7043); a Roman theatre (MCC2831); a Roman watermain, possibly leading to a bath-house (MCC2903); and a road leading to the walled Roman town (MCC2529). Many of these remains are located within Gosbecks Archaeological Park.

The site is also located within Stanway Green, a historic common area (MCC9142) which abuts onto Lexden/Stanway Heath (MCC9143-4).

Planning background

A planning application (212233) was made to Colchester Borough Council in August 2021 for *proposed extensions and alterations to main dwelling (revised description).* Revised documentation was added in December 2021.

As the site lies within an area highlighted by the CHER as having a high potential for archaeological deposits, an archaeological condition was recommended by the Colchester Borough Council Archaeological Advisor (CBCAA). The recommended archaeological condition is based on the guidance given in the *National Planning Policy Framework* (MHCLG 2019).

Requirement for work

The required archaeological work is for an archaeological monitoring of all groundworks (including services and landscaping). Details are given in a Project Brief written by CBCAA (CBC 2022).

Specifically:

The monitoring is being undertaken to identify and record any surviving archaeological deposits that may exist on site.

If unexpected remains are encountered the CBCAA will be informed immediately and the CBCAA will decide if amendments to the brief are required to ensure adequate provision for archaeological recording.

In the exceptional circumstances that important, well-preserved mosaic floors (or similar remains) are discovered, which cannot otherwise be avoided by the development (and satisfactorily preserved in situ), a contingency will be required for the block-lifting of these archaeological remains, e.g. well-preserved mosaic remains and for subsequent conservation and presentation. A decision about the need for conservation and lifting of important archaeological remains will be made in consultation with specialist stakeholders (e.g, Historic England, Colchester Museum and Norfolk Museums Service, Conservation and Design Services).

The method and form of development will also be monitored to ensure that it conforms to the previously agreed locations and techniques upon which the brief is based. Any variations will be discussed with the CBCAA immediately.

General methodology

All work carried out by CAT will be in accordance with:

- professional standards of the Chartered Institute for Archaeologists, including its Code of Conduct (CIfA 2014a-c)
- East of England Standards and Frameworks published by East Anglian Archaeology (Gurney 2003, Medlycott 2011) and the recent review updates on <u>https://researchframeworks.org/eoe/</u>
- relevant Health & Safety guidelines and requirements (CAT 2021)
- the Project Brief issued by the CBCAA (CBC 2022).

Professional CAT field archaeologists will undertake all specified archaeological work, for which they will be suitably experienced and qualified.

Notification of the supervisor/project manager's name and the start date for the project will be provided to CBCAA one week before start of work.

Unless it is the responsibility of other site contractors, CAT will study mains service locations and avoid damage to these.

At the start of work (immediately before fieldwork commences) an OASIS online record http://ads.ahds.ac.uk/project/oasis/ will be initiated and key fields completed on Details, Location and Creators forms. At the end of the project all parts of the OASIS online form will be completed for submission to Essex Historic Environment Record (EHER). This will include an uploaded .PDF version of the entire report.

A unique HER event number will be obtained from the CBCAA prior to the commencement of fieldwork. The curating museum will be notified of the details of the project and the event code, which will be used to identify the project archive when depositing at the end of the project.

Staffing

The number of field staff for this project is estimated as follows: One CAT Officer for the duration of the groundworks.

Monitoring methodology

There will be sufficient on-site attendance by CAT staff to maintain a watch on all contractors' ground works to record, excavate or sample (as necessary) any archaeological features or deposits. The investigation will involve monitoring of all groundworks and inspection of upcast soil.

All topsoil removal and ground reduction will be done with a toothless bucket.

If archaeological features or deposits are uncovered, time will be allowed for these to be planned and recorded.

If any features or deposits uncovered are to be destroyed by the proposed development, time will be allowed for these features to be excavated by hand. This includes a 50% sample of discrete features (pits, etc), 10% of linear features (ditches, etc) and 100% of all complex features and burials (see Human Remains policy below).

Fast hand-excavation techniques involving (for instance) picks, forks and mattocks will not be used on complex stratigraphy.

A metal detector will be used to examine spoil heaps, and the finds recovered.

Individual records of excavated contexts, layers, features or deposits will be entered on proforma record sheets. Registers will be compiled of finds, small finds and soil samples.

Site surveying

Normal scale for archaeological site plans and sections is 1:20 and 1:10 respectively, unless circumstances indicate that other scales would be more appropriate.

The site grid will be tied into the National Grid. Corners of excavation areas and trenches will be located by NGR coordinates.

Environmental sampling policy

The number and range of samples collected will be adequate to investigate the site, with particular focus on palaeoenvironmental remains including both biological remains (e.g. plants, small vertebrates) and small sized artefacts (e.g. smithing debris). Samples will be collected for potential micromorphical and other pedological sedimentological analysis. Environmental bulk samples will be 40 litres in size (assuming the context is large enough).

Sampling strategies will address questions of:

- the range of preservation types (charred, mineral-replaced, waterlogged), and their quality
- concentrations of macro-remains
- and differences in remains from undated and dated features
- variation between different feature types and areas of site

CAT has an arrangement with Val Fryer / Lisa Gray whereby any potentially rich environmental layers or features will be appropriately sampled as a matter of course. Trained CAT staff will do any processing and the flots passed to Val Fryer / Lisa Gray for analysis and reporting.

Should any complex, or otherwise outstanding deposits be encountered, VF/LG will be asked onto site to advise. Waterlogged 'organic' features will always be sampled. In all cases, the advice of VF/LG and/or the Historic England Regional Advisor in Archaeological Science (East of England) on sampling strategies for complex or waterlogged deposits will be followed, including the taking of monolith samples.

Human remains

CAT follows the policy of leaving human remains *in situ* unless there is a clear indication that the remains are in danger of being compromised as a result of their exposure or unless advised to do so by the project osteologist or CBCAA.

CBCAA will be notified immediately if any human remains are encountered during the monitoring.

If circumstances indicated it were prudent or necessary to remove remains from the site during the monitoring, the following criteria would be applied; if it is clear from their position, context, depth, or other factors that the remains are ancient, then normal procedure is to apply to the Department of Justice for a licence to remove them and seek advice from the project osteologist. Human remains removed from site for analysis this may involve radiocarbon dating (see finds section).

Following Historic England guidance (2018) if the human remains are not to be lifted, the project osteologist should be available to record the human remain *in situ* (i.e. a site visit).

Conditions laid down by the DoJ license will be followed. If it seems that the remains are not ancient, then the coroner, the client, and the CBCAA will be informed, and any advice and/or instruction from the coroner will be followed.

Photographic record

Will include both general and feature-specific photographs, the latter with scale and north arrow. A photo register giving context number, details, and direction of shot will be prepared on site, and included in site archive. Digital site photographs will be taken and archived as per Historic England guidelines (2015a).

Finds

All significant finds will be retained.

All finds, where appropriate, will be washed and marked with site code and context number. CAT may use local volunteers to assist the CAT Finds Officer with this task.

Most of our finds reports are written internally by CAT Staff under the supervision and direction of Philip Crummy (Director) and Laura Pooley (Post-excavation Manager). This includes specialist subjects such as:

<u>ceramic finds (pottery and ceramic building material)</u>: Matthew Loughton <u>animal bones</u>: Alec Wade (or Adam Wightman, small groups only) <u>small finds, metalwork, coins, etc</u>: Laura Pooley <u>non-ceramic bulk finds</u>: Laura Pooley <u>flints</u>: Adam Wightman <u>environmental processing</u>: Bronagh Quinn <u>project osteologist (human remains)</u>: Meghan Seehra

or to outside specialists:

anima^I and human bone: Julie Curl (*Sylvanus*) <u>environmental assessment and analysis</u>: Val Fryer / Lisa Gray archaeometallurgy: David Dungworth <u>radiocarbon dating</u>: SUERC Radiocarbon Dating Laboratory, Glasgow <u>conservation/x-ray</u>: Laura Ratcliffe (LR Conservation) / Norfolk Museums Service, Conservation and Design Services

Other specialists whose opinion can be sought on large or complex groups include: <u>flint:</u> Hazel Martingell <u>prehistoric pottery:</u> Stephen Benfield / Nigel Brown / Paul Sealey <u>Roman pottery:</u> Stephen Benfield / Paul Sealey / Jo Mills / Gwladys Monteil <u>Roman brick/tile</u>: Ian Betts (MOLA) <u>Roman glass</u>: Hilary Cool <u>small finds:</u> Nina Crummy other: EH Regional Adviser in Archaeological Science (East of England).

All finds of potential treasure will be removed to a safe place, and the coroner informed immediately, in accordance with the rules of the Treasure Act 1996. The definition of treasure is given in pages 3-5 of the Code of Practice of the above act. This refers primarily to gold or silver objects.

Requirements for conservation and storage of finds will be agreed with the appropriate museum prior to the start of work, and confirmed to CBCAA.

A contingency will be made in the budget for scientific assessment/analysis if suitable deposits are identified. This can include soil micromorphological and geochemical analysis of floors and dark earth deposits and/or absolute dating (such as archaeomagnetic and radiocarbon). The Historic England Regional Science Advisor will be consulted for advice.

Results

Notification will be given to CBCAA when the fieldwork has been completed.

An appropriate archive will be prepared to minimum acceptable standards outlined in *Management of Research Projects in the Historic Environment* (Historic England 2015b).

The report will be submitted within 6 months of the end of fieldwork, with a copy supplied to CBCAA as a PDF.

The report will contain:

- Location plan of the groundworks in relation to the proposed development. At least two corners of the site will be given 10 figure grid references.
- Section/s drawings showing depth of deposits from present ground level with Ordnance Datum, vertical and horizontal scale.
- Archaeological methodology and detailed results including a suitable conclusion and discussion and results referring to Regional Research Frameworks (Medlycott 2011).
- All specialist reports or assessments
- A concise non-technical summary of the project results.

An EHER summary sheet will also be completed within four weeks and supplied to CBCAA.

Results will be published, to at least a summary level (i.e. round-up in *Essex Archaeology & History*) in the year following the archaeological field work. An allowance will be made in the project costs for the report to be published in an adequately peer reviewed journal or monograph series.

A PDF copy of the full report will be uploaded by CAT to the OASIS website and the Colchester Archaeological Trust's Online Report Library (<u>http://cat.essex.ac.uk/</u>), both of which are publicly accessible.

Archive deposition

It is a policy of Colchester Borough Council that the integrity of the site archive be maintained (i.e. all finds and records should be properly curated by a single organisation), with the archive available for public consultation.

If finds are retained from the site the full archive will be deposited in Colchester Museums *unless otherwise agreed in advance*. (A full *copy* of the archive shall in any case be deposited). If there are no finds a full digital archive will be deposited with ADS Archaeology.

By accepting this WSI, the client agrees to deposit the archive, including all artefacts, at Colchester & Ipswich Museum.

The requirements for archive storage will be agreed with the curating museum.

If the finds are to remain with the landowner, a full copy of the archive will be housed with the curating museum and provision must be made for additional recording (e.g. photography, illustration and analysis) as appropriate.

The archive will be deposited with Colchester & Ipswich Museum or an alternate repository (approved by COLEM and CBCAA) within 3 months of the completion of the final publication report, with a summary of the contents of the archive supplied to CBCAA. Digital archives will be curated with the Archaeology Data Service, or similar accredited digital archive repository, that safeguard the long-term curation of digital records.

The CBCAA will be notified of the archiving timetable throughout the project and once deposition has occurred.

A digital / vector drawing of the site be given to the CBCAA for integration into the HER.

Monitoring

CBCAA will be responsible for monitoring progress and standards throughout the project, and will be kept regularly informed during fieldwork, post-excavation and publication stages.

Notification of the start of work will be given to CBCAA one week in advance of its commencement.

Any variations in this WSI will be agreed with CBCAA prior to them being carried out.

CBCAA will be notified when the fieldwork is complete.

The involvement of CBCAA shall be acknowledged in any report or publication generated by this project.
